

NetPDA & NetCell

Video Surveillance On The Move
The Perfect Video Portability Solutions

Full-featured mobile clients NetPDA and NetCell enable you to increase the responsiveness of your IP-Based surveillance system by providing the ability to monitor and control live cameras and investigate incidents on the fly, from PDAs or cellphones.

Get the Critical Information When You Need It, Where You Need It. With NetPDA and NetCell your security guards can access and control every camera, as authorized, while walking the beat or driving around the facility. Law enforcement officers can monitor and control PTZ cameras from outside the building to correctly assess an emergency event taking place inside. Via the PDA or cellphone, users can control functions such as light switching and magnetic locks triggered by the camera's contact closure output port, and instantly view recorded images for a better understanding of the event.

Full-screen high resolution live and playback viewing

Instant access to events via events list, time/date and playback controls

The NetPDA/NetCell Advantage

- Intuitive user interface
- User name and password protected
- Compatible with single or multi-server systems
- Real time monitoring of any authorized camera
- Control any PTZ camera including presets
- Control camera contact closure port
- Full screen mode view (PDA tilted horizontally) with PT controls
- Playback recorded and archived video
- Play video forward and backward, frame by frame or jump to next/previous incident, with forward/backward playback speed control
- Archive search by camera, Event List entry or Time & Date
- Call incident using alarm list
- Continuous wireless bandwidth optimization
