

Ocularis Video Synopsis

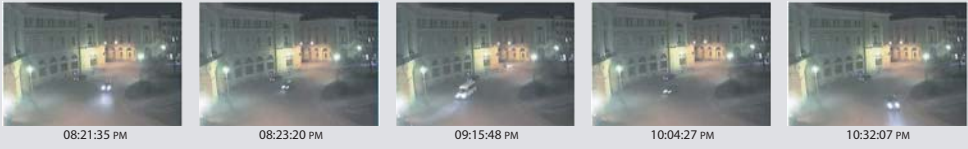

Video Activity Compression for Instant Identification of Key Events

Ocularis Video Synopsis, an optional module for the Ocularis Platform powered by the BriefCam Video Synopsis™ engine, enables the compression of video activity into a very short timeframe for faster identification of key events. With Ocularis Video Synopsis, a day of video footage can be compressed into a 60 second video clip.

Compress a day's worth of video into minutes Viewing and analysis of recorded video surveillance footage is a costly and lengthy task. Ocularis Video Synopsis allows operators to find and display any event, within minutes, through generation of a video synopsis - a short video clip summarizing the events original full length video by simultaneously displaying multiple objects and activities that have occurred at different times.

Based on BriefCam's patent pending video synopsis technology, Ocularis Video Synopsis tracks and analyzes moving objects, converting video streams into a database of objects and activities, with the ability to distinguish between objects of different movement parameters (e.g. people and vehicles.) When a video summary is needed, all objects from the target period are collected, and are shifted in time to create a much shorter synopsis video showing maximum activity. Clicking on any individual object or event in the clip displays the full length footage for targeted review, turning the condensed video clip into an index for the original video stream.

Ocularis Investigation Tools Ocularis Video Synopsis is part of the Ocularis Platform's wide range of video investigation tools, including the Kinetic Timeline, the Time Slicer and Motion Slicer, and instant access to alerts and sequences generated by Ocularis as well as by 3rd-party systems. All are aimed toward providing users with the most efficient process of intelligent detection, automated alerting, instant access to video of incidents, identification of persons and behaviors, and export of evidence.

Composite Video Clip

Ocularis Video Synopsis simultaneously displays events that took place at different times, creating a composite, events-only video clip that condenses hours of video into a few minutes
