Release Notes for Ocularis DS v1.0 SP1

In this document:

1. General
2. Feature Changes
3. Installation/licensing
4. Ocularis Client v2.0

General

Service Pack #1 (SP1) of Ocularis DS v1.0 includes version 2.0 of Ocularis Client, and is bundled for delivery with the NetDVMS 6.5g video management system.

SP1 includes fixes to certain stability and functional issues, as well as a number of new features pertaining to user authorization management, networking, bookmarking and licensing.

Feature Changes

- Bookmarking:
Bookmarks are now marked “In Progress” until they are successfully created. If there is an issue creating a bookmark, the entries in the database pertaining to that bookmark are deleted.
- Connectivity to Ocularis Base from outside the network
Internal/External IP Addresses and Ports were added, for using an Ocularis Client from outside the network
- User Privileges:
User group privileges for can now be configured, per camera for receiving audio from camera-connected microphones, exporting still-image event report, exporting video evidence and creating bookmarks.
- Event handling:
Added comment capability when handling an event.

Installation/licensing

- Licensing:
As part of the license activation process, the software will verify a V2C file is not applied more than once.

Ocularis Client v2.0:

- Corrected the aspect ratio calculation for digital PTZ
- Fixed an issue that prevented BMP file rendering in a webpage view
- Improved viewport alignment
