Release Notes for Ocularis Client Lite Rev 1.0 SP2 (Build 2.2)

In this document:

1. General
2. Installation Notes
3. Feature Changes
4. Fixes

General

OnSSI Ocularis Client Lite 2.0 offers all of the functionalities of Ocularis Client 2.0 which do not involve connection to the Ocularis DS Base application. Version 2.0 includes the following changes:

Installation Notes:

- The new revision of the Ocularis Client requires uninstalling any previous version prior to installation.

Feature Changes

- 64-bit support: Ocularis Client Lite 2.0 can now run on 64-bit hardware (as a 32-bit application).
- Windows 7 support: Ocularis Client Lite now supports the Windows 7 operating system.

Fixed issues:

Fixes were added to the following known issues:

- Delay on pushing manual video alerts from user to user
- Intermittent inability to save views created in Ocularis Client Lite.
- Fixed an issue concerning video artifacts, typically in the form of 'ghosting' (the outline of a moving object trailing behind its current position or appearing briefly within the video feed). This was most likely to occur when viewing many MPEG4 or H.264 cameras (Note that in order to assure adequate operation, CPU utilization must remain below 90%).
